

Pilot-to-Production Readiness Review

Outline · 2 weeks · fixed fee quoted before you commit (USD 5,000–15,000 depending on pilot complexity, excl. taxes) · day-3 checkpoint, stop at no cost if not a fit

Who it is for

A team whose AI pilot works but stalls before production because it touches regulated or confidential data.

What we review

- The pilot's architecture and data handling
- Governance: explainability, human oversight, traceability
- Security and reliability expected in production
- Day-to-day operations: access, monitoring, rollback

What you receive

- A current-state assessment of your pilot
- A gap analysis of what blocks production
- A prioritized remediation roadmap, costed by effort and risk
- A 60–90 minute walkthrough with your team

Terms

- Fixed scope. Fixed fee, quoted in writing before you commit. Delivered 2 weeks from kickoff and access.
- Day-3 checkpoint: if either side concludes the Review is not a fit, we stop there and nothing is owed. After the checkpoint the fixed fee is due; we invoice only then.
- The review stands on its own: no obligation to hire us for what comes next.

What next

If you wish, the same team can take the roadmap to governed, audit-ready production.
